Press Release

Aspen Avionics Announces EASA STC for Cessna/Reims Aircraft

Albuquerque, NM, January 22, 2010: Aspen Avionics, Inc. announces European Aviation Safety Agency (EASA) STC 10028486 for installation of the Aspen EFD1000 Primary Flight Display in Cessna 172, 175, 177, and 182 series aircraft, including models manufactured by Cessna/Reims. Avionik Straubing in Germany developed this STC.

“The continued expansion of Evolution Flight Display STCs around the world speaks to Aspen’s growing impact in the GA market,” says Director of Marketing Brad Hayden. He adds, “There are more STCs currently under development and we will continue to provide these updates as the information becomes available.”

The EFD1000 Primary Flight Display is a part of the Aspen Evolution Flight Display System—an affordable, expandable and upgradable PFD, MFD and hazard sensor cockpit solution for general aviation aircraft. Highly compatible, the flexible Evolution Flight Display System lets aircraft owners install up to three Evolution Flight Displays as their needs and budgets permit.

About Aspen Avionics, Inc.

Aspen Avionics specializes in bringing the most advanced technology and capability from the commercial and business aviation markets into general aviation cockpits—and budgets. Our products increase situational awareness and reduce pilot workload, making it even easier and safer to fly in both VFR and IFR conditions. The way we look at it, getting the latest avionics technology shouldn't always mean spending a lot of money—on equipment or installation. At Aspen Avionics, we design products to be affordable, easy to install, and easy to own. The company can be found at www.aspenavionics.com, and may be reached at (505) 856-5034.
